

PRODUCTION METHOD FOR LAMINATE TYPE DIELECTRIC
DEVICE AND ELECTRODE PASTE MATERIAL

5

ABSTRACT OF THE DISCLOSURE

10 This invention provides a method of producing a
laminated type dielectric device free from peeling of an
electrode layer and a ceramic layer and from voids in
both electrode layer and ceramic layer, and an electrode
paste material. The invention relates also to an
15 electrode paste material for constituting electrode
layers of a laminated type dielectric device produced by
at least the steps of alternately laminating ceramic
layers 11 containing a lead element as a constituent
component and electrode layers 2, and degreasing and
20 baking the laminate, wherein the electrode paste material
contains CuO as a principal component of a starting
material of an electrically conductive material, a
solvent, a binder, and a cooperative material consisting
of at least one kind of the main components constituting
the ceramic layer 11.
